

# CMP PAD CONDITIONING ARM SERVICES

Your source for leading-edge  
surface processing solutions

Axus Technology provides pad conditioning arms repair and remanufacture services for Applied Materials 200mm and 300mm CMP tools. The comprehensive rebuild services include a component kit that replaces all of the basic mechanical components from bearings and seals, to other routine replacement items.

Each pad conditioner arm receives a thorough incoming evaluation, application of base rebuild kit, and recoating of components (where required).

Our rebuild program delivers consistent operation and production performance required by CMP users; providing them with proven advantages such as:

- Repeatability production-ready pad conditioner performance
- Consistent tool-to-tool pad conditioner operation
- Improved pad-conditioner reliability, with reduced maintenance requirements
- Performance tracking of each pad conditioner for long-term reliability

## FEATURES

- Typically 5 week repair cycle
- Each pad conditioner assembly is tested and serialized.
- Delivered in "nearly new" condition for replacement in CMP tool.
- Upgraded OEM coating (where required) for better adhesion, chemical resistance, and durability
