

CMP PAD CONDITIONING ARM SERVICES

Your source for leading-edge
surface processing solutions

FEATURES

- Typically 5 week repair cycle
- Each pad conditioner assembly is tested and serialized.
- Delivered in "nearly new" condition for replacement in CMP tool.
- Upgraded OEM coating (where required) for better adhesion, chemical resistance, and durability

Axus Technology provides pad conditioning arms repair and remanufacture services for Applied Materials 200mm and 300mm CMP tools. The comprehensive rebuild services include a component kit that replaces all of the basic mechanical components from bearings and seals, to other routine replacement items.

Each pad conditioner arm receives a thorough incoming evaluation, application of base rebuild kit, and recoating of components (where required).

Our rebuild program delivers consistent operation and production performance required by CMP users; providing them with proven advantages such as:

- Repeatable production-ready pad conditioner performance
- Consistent tool-to-tool pad conditioner operation
- Improved pad-conditioner reliability, with reduced maintenance requirements
- Performance tracking of each pad conditioner for long-term reliability
